Goals	We want to learn about agile methods, good team work and practice team work. We want to build a cool open-source piece of software and “valuable” NFTs.
Meeting norms	We meet at least once a week during the project. Please excuse yourself when you know that you’ll be missing (like illness, important appointment) otherwise we want to not more than 15min late but on time in the average case. Single lapses or emergencies are permissible.
Working norms	We try to reach consensus where possible. As last resort we respect the majority rule for decisions which affect the whole team. Exceptional decisions for individual team members are possible for special circumstances. We participate fairly. It doesn’t mean that everyone is equally fast or performing but that we are willing to invest time like others are. We individually contribute to the project to perform for our Credit Points. Work is distributed in team meetings together. Team work should be a safe space for everyone and allow for clarifying work or personal conflicts or appropriate criticism. You may contact Jule as person of trust for non-technical problems and as mediator for anonymous criticism. We value quality over quantity, maintainability over many features.
Coordination norms	No one is forced to do something s/he really doesn't want. Volunteers are considered first. If no one is willing to do a task and assignment is needed then democratic allocation.
Communication norms	We let others say their (valid) opinion and avoid insults, harassment, discrimination due to individual properties like gender, color... We don't expect each other to respond during weekends. We expect responses in 48h within week. We try to answer at least next day. We use team Channels on Slack for help. We confess that nobody is perfect. We accept criticism of ourselves and permit others to correct us.
Consideration norms	We try to clear misunderstanding and create understanding instead of bashing others for disagreement. We don't want to be self-opinionated and give examples rather than just stating to be right.
Cont. improvement norms	There is continuous review of code and our wellbeing by using the “happyness index”. We will use Scrum-related methods to track progress. Coding, Style and review rules and guidelines are respected for the reason of code health and team work. Syntax Formatters will be used if they are needed to ensure style guidelines. If someone can't finish story points over two weeks then we try to find a solution for improvement. Workload estimation isn't perfect. We will tell if work turns out to be more effort than estimated.
Rewards	People will be granted NFTs under applause. 2 Story Points = 1 NFT.
Sanctions	People who clearly violate rules multiple times should either write a poem, do extra work or obtain remaining User stories instead of free choice.
Signatures [optional picture]	I hereby declare to try and be willing to comply with our team contract [required]:

Product Vision	Project Mission
<p>NFTs allow for accessible decentralized market power where people can create, collect and trade virtually represented things. NTFs therefore have potential for the worldwide community to empower more people to produce and supply, without profit-making intermediaries. A democratic market would help to reduce big social problems, tremendous inequality and intransparency which arises out of concentrated power. Entities also have the possibility to create their own secondary market to sell own products to enable closer customer relationships.</p> <p>NFTs help simple creators to earn from their work; it improves transparency, trust and can help legal enforcement, without the need for payment processors and banks.</p> <p>Public blockchains with transparent transactions could help to recognize illicit and criminal money flows like corruption and tax robbery schemes.</p> <p>Additionally, NFT markets allow for new products and business models like crypto games or crypto funding and can leverage several benefits of the blockchain technology to reduce (transaction and marketing) costs. It allows for implementing security/protection goals that are useful for practically every digital marketing.</p>	<p>Our project can contribute to the vision by creating a reusable example application which generates valid NFTs and automatizes important steps in order to lower the usability hurdles and improve crucial adoption.</p> <p>As an open source project, the result can be used by others, also for small to medium sized companies, to easily create NFT solutions for their own marketing strategies, sales management or online campaigns for several non- or commercial purposes.</p> <p>A private secondary market mechanism can be supported for a deeper relationship of customers to the owning seller.</p>

Term	Definition
Non-fungible Tokens (NFT)	Digital assignment of an owner (wallet) to digitally represented asset, stored in a blockchain. It is an entitlement to sell or use certain asset. It differs from usual crypto currency that every NFT has an individual value.
fungible token	Indicator of financial asset which is used to buy goods/services and is fully interchangeable with other fungible tokens of the same kind.
wallet	A digital depot for crypto-asset, NFTs and other crypto currency.
drop	An event where a collection of NFTs first hits the market and buyable and delivered to buyers. Pre-drop reservations possible.
minting	Process of turning digital asset into a valid valuable NFT.
blockchain	A cryptographically secured append-only database whose history is immutable. This makes it perfect for high-security applications like finance.
Ethereum	Company and the eponymous popular blockchain. It supports NFTs and (fungible) crypto currency.
Ether (ETH)	Cryptocurrency used with Ethereum
Kovan	A Ethereum testnet where ETH are easy and free to get online, but in limited rate of course.
Mainnet	A production blockchain that is used for valuable transactions.
Testnet	A blockchain for testing purposes. Content and currency in the test net do not have real value.
announcement	A News section with title and content which is displayed to visitors of the site.
faucet	Source for obtaining crypto currency, particularly for test currency like the one that is used in Kovan.
Verified partner	User account without admin privileges which can compose and trigger own NFT-drops in the app.

Sprint	Status	Source	Impediment	Resolution
1	Resolved	Nike	Communication - feeling of people pretending to be "superior"	Democratic voting before deciding things Slack: Poll Function Zoom: Reactions
1	Resolved	Nick N	Chaotic in general	Getting used to the process with more time If needed: coaching sessions with Jule
1	In-work	Nick S	Work quite late - finish last minute	Try to start work already at the beginning of the sprint Polls to ask for problems
1	Resolved	Nick S	Double PO role - hard to communicate; no close collaboration	try to improve communication by having meetings previous to talking with industry partner
1	Resolved	Christoph	Not too much experience in communication within teams/ groups	Give clear instructions to other team mates on how you would like the communication - be on time for the meetings
1	Resolved	Dominic	Unstructured Meetings	Prepare Agenda for the meeting - send it out beforehand have a moderator for the meeting
1	Resolved	Dominic	Unnecessary comments during meetings	Focus on essential topics and try to only talk little about "personal issues" to stay in the timeframe
2	Resolved	Nike	Confusion who needs to write features	Next PO has to write new user stories Only POs write user stories and have an extra slack channel with ideas
2	Resolved	Nick N	Information about project status / vision of project and customer opinions	Summary of Industry meeting by PO --> maybe new slack channel?
2	Resolved	Nick S / Felix	Who is responsible for Deliverables?	Second Board on github for project internal things
2	Resolved	Dominic	Everything in general channel	Create new channels in slack for organisation
3	In-work	Dominic / Christoph	Pull requests all over the place - what should be happening in the review phase? How many people?	Creation of Slack Channel Specify guidelines and agree on it democratically
4	Resolved	Nike	Review Comments were unclear	Put into guidelines - clear suggestions for the code review
4	In-work	Christoph/Felix	Improvement of branch naming / management	Suggestions and democratic vote on branch structure
5	In-work	Dominic/ Que	Pull requests take too long - too long of discussions	Accept small deviations from guidelines - give feedback but still grant review
5	In-work	Nike	Waiting for reviews more than 48hrs	Vote in Slack Channel
5	In-work	Dominic	We are not up to date about others' status	More regular Stand-up Mails by everyone with longer description
5	In-work	Nick S	Wokr is not focused on most important things	Focus on tickets and reviews you are assigned to

Sprint	Status	Source	Impediment	Resolution

#	Theme	Goal	Feature Name	Est. Size (Feature)	Est. Size (Sprint)	Real Size (Feature)	Real Size (Sprint)	Burn-Down
7	Towards the NFT-Drop				0		0	127
			NFT-listing implementation, NFT preview?, proper announcement design, user purchases, admin triggered drop					
			Design Backwards ticker on landing page					
			Design profile mockup					
			Implement proper design for the current announcements					
			Security for NFT-drops (blockchain concept for verified partners only)					
			Blockchain Drop Creation with NFT prices					
			Blockchain buying timespan for reserved NFTs after NFT-drop started					
			Implementation of user profile (frontend)					
			Implementation of public view of available-NFT-drop listing (frontend)					
			Implementation of application header and footer for mobile devices (frontend)					
			Addition of authorized verified partner as team role					
			Continuous Integration with a few mocked example test cases for Frontend					
8	Reaching The Drop				0		0	127
			admins can trigger and create new NFT-drops; NFT-listings can be public/private and viewed. only eligible user roles (Admins, authorized validated users) can create NFT drops. NFTs are distributed randomly to users after drop takes effect. Backend CI pipeline stands.					
			Design mockup for NFT-drop dashboard					
			Design NFT preview and individual NFT info page					
			Blockchain alternative distribution mechanic for unsold NFTs					
			Implementation of backwards running ticker (belonging to which NFT-drop?)					
			Implementation of view of a user's NFT collection, only for registered users					
9	NFT Drop Creators encountered!				0		0	127
			continuation of the previous sprint goal. Some NFTs are only accessible/viewable in this closed market like private-user-NFTs. NFTs can be previewed in individual info page and optionally in bigger size.					

#	Theme	Goal	Feature Name	Est. Size (Feature)	Est. Size (Sprint)	Real Size (Feature)	Real Size (Sprint)	Burn-Down
			Implementation of NFT-drop dashboard (part 1?)					
			Implementation of NFT preview and NFT info page					
10	NFT studio				0		0	127
			simple NFT data (like images or text files) can be uploaded and stored/retrieved in database and connected to drops					
11	Closing the (NFT) circle				0		0	127
			NFT resale by people of the "inner circle", i.e. owners and bidders of NFTs from the past with account. "Resale"-button for NFTs, price offer option for buyers (when owner selects it). Multiple NFTs can be selected or filtered for easy multi-action and search on all selected NFTs. With each resale, the original creator obtains a portion of the price.					
12	Lessons of History Channel				0		0	127

#	Theme	Goal	Feature Name	Est. Size (Feature)	Est. Size (Sprint)	Real Size (Feature)	Real Size (Sprint)	Burn-Down
			Provide sales history which is listing sales records for NFT (re)sales. Alternative user registration, embedding twitter chat on site(??)					
13	red, green, REFACTOR				0		0	127
			Usability improvements, fancy addons and design implementation (if time permits). Cleanup and refactor code for maintenance and allow for easier future development.					

Burndown

Est. vs. Real Size

[illegible]

#	Feature Definition of Done	Sprint Release Definition of Done	Project Release Definition of Done
1	The code is reviewed by at least two people	Release candidate was tagged	User documentation available
2	Every larger component/object/class has a comment/JDoc. Small functions should either be self-explanatory based on the function name or also be commented	Tests for the release candidate were compiled, build and run	Tests for all application critical functions
3	Feature works on the machine of a different team member	Release candidate is deployed to operations environment	
4	Code is in the main branch	Release is tagged with current sprint number	
5	GitHub CI and checks succeed	Documentation available	
6	[Code coverage, testing?]
